

**Application Lifecycle Management (ALM)** covers the entire history of an application from its concept to design and ultimately its withdrawal from the enterprise systems. In this journey, three main questions arise.

1. The key question for the **CIO** is – How to achieve maximum strategic alignment and pay-off for the IT application portfolio?
2. The primary question for the **IT Portfolio/Program Manager** is – Which projects within the portfolio deserve more attention than others and how to deliver projects successfully as per stakeholder’s satisfaction?
3. The fundamental question for the **IT Operations Manager** is - How to improve the overall quality of IT application support that meets the business objectives?

[www.catyeus.com](http://www.catyeus.com)

The answer to these questions is Projectile - the Application Lifecycle Management (ALM) tool which integrates both **IT Project Portfolio Management (IT-PPM)** and **IT Operations Management (IT-OM)**. Projectile is designed and built on three main aspects.

**1. Consistency** for reduced variation in the ALM by leveraging the best practices from SEI-CMMI, PMBOK, IEEE, and ITIL.

**2. Integration** for improved productivity and collaboration by serving as one tool for all ALM activities.

**3. Visibility** for single version of truth in the ALM. Projectile enables the right users to have access to the right information at the right time.

The key features of Projectile include:

1. Requirements Engineering
2. Traceability Analysis
3. Document Management
4. Workflow Management
5. Risk, Defect and Issue Management
6. Time and Expense Management
7. Verification and Validation (Testing)
8. Resource Management
9. Stakeholder Management including Status Reports
10. Team Collaboration

Designed and built exclusively for Application lifecycle management (ALM), all features in Projectile are people-focused. Projectile’s intuitive, easy to use and immersive user interface promotes high adoption rates and a lower learning curve. Projectile can be hosted In-premise or on a cloud as Software-As-A-Service (SaaS) leveraging the best practices of multi-tenancy, hardware virtualization and security.

Add New Module

SI No	Module Id	Module Name	Edit
1	MD01	Contract Publishing	

Add New Function

SI No	Function Id	Function Name	Edit
1	FN01	Material Contract Publishing	

Add New Feature

SI No	Feature Id	Feature Name	Feature Type	Severity	Edit
1	FT01	Item Category W publishing	Functionali...	Blocker	
2	FT02	Item Category M publishing	Functionali...	Must do	

Projectile is top-down driven. All ALM activities are traceable to the preceding activities.

Projectile provides real-time comprehensive reports and dashboards.

Projectile is based on 4 different roles in the ALM so that the right users have right access to information and functionality.

We also provide constant support to ensure that you always have the expert advice.
